## Steps

- 1 Thorough preparation. Remove all loose materials and equipment (manure, drinkers, feeders, etc.) from the housing unit and flush all coarse organic matter.
- 2 Coat all surfaces in the housing unit (and associated materials) with products from the MS TopFoam range. In cases of heavy fouling, pre-wet the surfaces.
- 3 Spray the housing unit (and all associated materials) clean using a high-pressure jet and then rinse with low-pressure water.
- 4 Disinfect the housing unit with MS MegaDes Novo
- 5 Repeat step 3 and disinfect the housing unit against parasites with **MS MegaDes Para**
- 6 Rinse the housing unit (and all associated materials) with clean water and allow it to dry.

## Efficacy

### Bacteria

• Pseudomonas Aeruginosa • Proteus vulgaris • staphylococcus aureus • enterococcus hirae

### Yeasts & fungi

• Candida albicans (yeast) • Aspergillus brasiliensis (fungal spore)

### Parasites

MS MegaDes Para is active against parasites oocysts and wurms, for example eimeria ssp (coccidiosis)  
Ascaris suum - ascarid eggs (endoparasites)  
Cryptosporidium parvum oocysts
